

## Jedox for Excel

### Business Intelligence for Planning, Analysis, Reporting and Consolidation

Extend your planning, analysis and reporting process with Jedox for Excel to a cost efficient Business Intelligence Solution. You will avoid the well-known spread sheet hell due to Jedox's central data storage logic, whilst remaining in your comfortable Excel User Interface.

As a Jedox User you do not have to leave your known Excel environment. Jedox simply ensures that relevant dimensions of corporate information can be viewed and analysed at the same time.

- Features a highly efficient multidimensional in-memory database (OLAP Server Database) that is available to all users
- Supports write-back, real-time consolidation as well as numerous Business Intelligence basic functions
- Developed for the purpose of planning, analysis, reporting and consolidation in the areas of finance, sales and controlling

#### Microsoft Excel Extension

Jedox for Excel extends your Microsoft Excel application by an easy to install Add-in, that allows access to the Jedox OLAP Server functionalities, directly out of Excel. Starting from Data modelling, administration of User management and simple Data import, all accessible from your known Excel environment. Jedox for Excel works with Microsoft Office XP, 2003, 2007 and 2010. Alternatively you may use Jedox for Open Office Calc.

#### Jedox is Cell-based

When you do a query in a relational database, the smallest result you get is one record (usually consisting of several fields). When you run a query in Jedox, your result is a single cell value. Jedox thinks in cells, not in records, and this explains why Jedox is so compatible with Microsoft Excel, because Excel is cell-based, too.
