

Jedox for Web

Jedox Web combines all components of Jedox in one uniform Web Platform

Jedox Web is a component of the Jedox Suite, and includes all tools and modules that are necessary to create comprehensive Planning, Analysis and Reporting applications. All components are 100% web-based and do not need to be installed on your PC.

Jedox Web consists of the following:

- **Jedox Spread sheet** Jedox spread sheet offers the comfortable User interface and usability known within Microsoft Excel, but also adds new features such as Dyna Ranges (a dynamic formatting technology) which simplify creation of dynamic Reports and Planning.
- **Jedox Pivot** Allows Ad-Hoc requests on all Databases of a Jedox OLAP Data model. Jedox Pivot allows filtering of all Dimensions, as well as their rows and columns. A request can be saved at any point and be shared with any collaborators.
- **Jedox User Manager** Within the Jedox User Manager you manage all users and user groups within the Jedox Suite that are allowed to access single components and Databases.

- **Jedox ETL Manager** Within the Jedox ETL Manager all Data integration projects are created, supervised and launched. In addition to the definition of source and target, the transformation and loading of Data into a Jedox OLAP Data bases, the Jedox ETL Manager also creates monitoring reports of the launched Data integration processes.
- **Jedox File Manager** The Jedox File manager allows you to set user rights for every file within the Jedox suite in addition to the Jedox Pivot and Jedox Spread sheet files. Jedox File Manager offers every user and every application a data space to save files on. Hence, other information that may be included in a text doc or a PDF can easily be integrated into the Jedox Application.

Within the Jedox Suite Premium you will find in addition:

- **Jedox Report Manager** Jedox Report Manager allows you to easily and quickly publish any information that is managed within the Jedox File Manager. Jedox Report Manager even offers the possibility to create customized Report indexes in any given hierarchy. Via different variables you are then again, able to assign these report indexes dynamically to different user groups or define them as file dependent.
- **Jedox Modeller** Allows the creation and administration of Jedox OLAP models. By the easy to use modelling environment, it is possible to create dimensions, set elements and combining them within a Data Cube without any preliminary knowledge. All of the known features for the creation of Jedox OLAP Databases known from Jedox for Excel, can be used in the Web using the Jedox Modeller.
